

CHLORIDE SYSTEMS

TYPE: _____

CATALOG NO.: _____

GENERAL DESCRIPTION

The Fusion III is an architectural grade lighting product based on the latest technology in high-output white LEDs. Nickel metal hydride batteries and a diagnostic charger allow for normally on security and emergency lighting in one fixture. Self-powered models may be wired to allow independent wall switching when line voltage is present. Failure of line voltage will cause automatic emergency transfer. Fusion III is available in a wide range of decorative finishes to blend with any setting.

ILLUMINATION

Illumination is provided by two field-replaceable, independently powered white LED modules and a vacuum plated polycarbonate reflector. The reflector design has been optimized to produce one-foot candle average illumination along a 5'x27' path of egress, with multiple fixtures, when placed at a mounting height of 10' AFF. IES photometric data files are available.

INSTALLATION

The Fusion III housing is designed for direct mounting to a 3½" or 4" octagonal or single gang junction boxes using convenient keyhole knockouts. The unit may also be connected to conduit via its conduit entry knockout. A bar hanger kit is provided for recessed mounting.

DIMENSIONS

Fusion III

Architectural White LED Lighting Fixture

Optional Emergency Packages
7.2 Volt, 12 Watt, White LED Lamps
NiMH Battery, Standard Self-Diagnostics Electronics*
Damp Location Listing Standard

HOUSING

Durable, die cast aluminum housing and cover with UV stabilized polycarbonate lens.

A full range of pleasing architecturally inspired powder coated finishes are available (see below).

A bar hanger kit is supplied standard to accommodate recessed ceiling mount applications. The unit may also be surface ceiling mounted directly or with the use of standard 3½" or 4" octagonal or single gang junction box.

A knockout is provided on the housing for conduit installations.

Tamperproof hardware is available as an option.

INTELLI-CHARGE ELECTRONICS AC Only - 120/277 VAC dual voltage input with surge protection is standard on all models.

Emergency Operation - Charging system is microprocessor driven with software embedded diagnostic routine and temperature compensation. See specification sheet C1059 for electronics details. 120/277 VAC input, surge protection, brownout, AC lockout and low voltage disconnect features are standard.

INTELLI-CHARGE SELF-TESTING DIAGNOSTICS (OPTIONAL)

The Intelli-Charge diagnostic/charging platform with self-testing mode automatically runs a one-minute self-test every 30 days and a 30-minute test on the sixth and twelfth month. A one-minute or 90-minute test may be initiated via the push to test switch on the unit or by activating the appropriate test command on the optional IR test device.

*Self-powered models incorporate the Intelli-Charge diagnostics electronics package. Self-testing is a factory installed option.

SHOWN: F3NBRIC

OPERATING TEMPERATURE RANGE

Self-Powered
 Damp Location: 32°F (0°C) to 104°F (40°C)
AC-Only and 2-CKT Models
 Damp Location: -40°F (-40°C) to 104°F (40°C)

BATTERY

Maintenance-free sealed nickel metal hydride with 10-year life.

CODE COMPLIANCE

UL 924 listed
 UL damp location listing standard
 NFPA 101, NEC, BOCA, OSHA, and IBC illumination standards
 UL 1598 Non-IC

ELECTRICAL SPECIFICATIONS

Input Power Requirements

AC-Only Models
 120 VAC: 60 Hz, 0.203A
 277 VAC: 60 Hz, 0.087A
Self-Powered Models
 120 VAC: 60 Hz, 0.198A
 277 VAC: 60 Hz, 0.088A

WARRANTY

Three year full electronics warranty
 Five year full plus five year pro-rated NiMH battery warranty

Specification Data for Fusion III

PHOTOMETRIC DATA

Recessed Ceiling Mount in AC Mode, 10' AFF, Two Fixtures

Recessed Ceiling Mount in Emergency Mode, 10' AFF, Two Fixtures

SUGGESTED SPECIFICATION

Furnish and install Chloride's Fusion III lighting fixture model _____. The unit shall be constructed to meet Underwriters Laboratories, Inc. Standard #924 and must be installed to conform to Article 700 of the National Electrical Code (NEC).

INSTALLATION AND OPERATION – Unit shall be easily field connected to a 120 or 277 VAC, 60 hertz, unswitched power source. Installation must comply with the NEC as well as other applicable codes.

CHARGER (Emergency Operation Only) – All self-powered models shall be provided with Chloride's Intelli-Charge diagnostics electronics platform. Intelli-Charge will detect and notify the installer regarding incorrect wiring of the transformer primary and will restrict the damaging effects on the printed circuit board. The Intelli-Charge electronics package shall provide continuous, real-time monitoring of all the critical equipment functions including, but not limited to: line voltage status and condition, charger fault, transfer fault, battery fault, and LED load fault and notify personnel with a visual indicator sequence. Optional audible diagnostics as well as self-testing diagnostics shall be available from the factory. The self-testing option shall satisfy the periodic testing requirements in NFPA 101, Life Safety Code as well as the International Building Code (IBC). The Intelli-Charge circuit shall continuously sample ambient temperature conditions and adjust the charging regime to compensate for typical and dramatic ambient conditions to maximize the life of the battery. An on-board IR receiver shall be standard and pre-programmed to operate from an optional IR user interface device (available as an accessory item). Upon utility power failure or brownout, the unit shall automatically provide emergency battery power and maintain the stated illumination level output wattage for a minimum period of 90 minutes. Upon restoration of utility power, the charging circuitry shall restore the battery to full charge within UL 924 requirements following a rated discharge of not more than 90 minutes.

BATTERY (Emergency Operation Only) – The battery shall be maintenance-free nickel metal hydride. The NiMH battery shall provide trouble-free operation in temperatures ranging from 32°F (0°C) to 104°F (40°C) and is suitable for use in damp location applications. The battery shall be tested and recognized in accordance with the accelerated life testing requirements of the IEC. The battery shall be supplied with a five-year full warranty.

ILLUMINATION – Illumination shall be provided by two six-watt white LED modules used in conjunction with a vacuum metallized polycarbonate reflector. Adjacent fixtures mounted 27' apart shall provide one foot-candle average in the emergency mode when mounted at a 10' mounting height above finished floor.

HOUSING – Housing construction shall be of premium die cast aluminum with a UV stabilized polycarbonate diffusing lens. The unit shall be available in multiple colors and finishes. The unit shall be wall mounted to standard 3 1/2" octagonal and single gang junction boxes. The unit shall also provide a knockout for conduit entry. A bar hanger kit shall be provided for recessed mounting.
