MAX-LITE SERIES WITH INTELLI-CHARGE!

June 2010 - At Chloride Systems we pride ourselves at continuing to offer advanced technologies in emergency lighting. Within the next 30 to 60 days, our Max-Lite Series will be converted over to our Intelli-Charge circuit. The Max-Lite Series is ideal for locations where oil, water and dust resistant equipment are required. The Max-Lite Series is certified to NSF Standard 2 Splash Zone, and is UL listed for use in damp and wet locations in temperatures ranging from 0°C to 40°C. Standard Intelli-Charge self-diagnostics electronics continuously monitors all critical functions and the optional self-testing feature satisfies the monthly periodic testing requirements in NFPA 101 and the IBC. Installations where Max-Lite Series excels: manufacturing facilities, parking decks, warehouses, and water treatment facilities.

Equipped with Intelli-Charge for self-diagnostics, the Max-Lite Series is provided standard with an on-board IR receiver and is pre-programmed for use with our optional hand held test device allowing for remote testing in accordance with all applicable building code requirements. One-minute and 90-minute testing may also be initiated via the push to test switch on the unit.

The Max-Lite Series is available in 6 or 12 volt, 25-150 watt units with available tungsten or halogen lamp heads. The Max-Lite Series includes maintenance-free, sealed lead calcium or nickel cadmium batteries that surpass the requirement for 90 minutes of emergency power.

Thank you for your continued support!

*Remember to keep **Chloride Systems** in mind for all of your emergency lighting needs!*
